UNIDIRECTIONAL SECURITY GATEWAY

WF-500

Waterfall's flagship Unidirectional Security Gateway WF-500 replaces firewalls in industrial network environments, providing absolute protection to control systems and industrial control networks from attacks emanating from external less-trusted networks.

Unidirectional Gateways contain both hardware and software components, and ensure data flow in one direction only, from the ICS network to the IT network, **providing 100% protection from remote cyber threats.**

COMBINATION OF HARDWARE & SOFTWARE

OUR HARDWARE MAKES YOU SECURE

OUR SOFTWARE REPLICATES SERVERS IN REAL-TIME

- » **TX Host:** gathers data from industrial servers and devices in the ICS network.
- » **TX Module:** a transmitter only containing a fiber-optic laser.
- » **Fiber optic cable:** connects TX module to RX module, permitting data flow in one direction only and preventing data from entering back into the protected network.
- » **RX Module:** an optical receiver only.
- » **RX Host:** replicates & emulates a wide array of industrial servers, devices, protocols and other systems on the IT network.
